About Me

As a 3rd year student in the Department of Computer Engineering at Atılım University, I am striving to develop myself both in university and through personal curiosity by adding new programming languages to my portfolio in order to prepare myself for the requirements of the digital age. My short-term goal is to develop the programming languages I have learned according to today's conditions, observe real projects, and have the opportunity to test my knowledge and my long-term goal is to become one of the unique programmers in the world. I have observed that success in the business world does not only come from working hard and constantly improving yourself, but also from having strong interpersonal relationships. I am also continuing my membership in various social clubs that I believe can contribute to my profession at university.

Education

2020-2024

Computer Engineering, Bachelor of Engineering
Atılım University, Ankara

Work History

2022-07
2022-08
